

## **Lake Conservation Committee and Grievance Redressal Committee Meeting**

Venue: STP office, Lake NMK, Rajendra Nagar, Ranga Reddy district

Date & Time: 6<sup>th</sup> March, 2014 at 10:30 am

### **Members Present are placed as annex – I.**

The Senior Social Development Specialist of World Bank, Officials of APPCB and other stakeholder members attended the meeting. The committee members were appraised about the roles and responsibilities of the committees. The gist of the discussions is as follows:

#### **Solid Waste Management in KIE:**

- Mechanism for prevention of the solid waste dumping in the Kattedan Industrial Estate (KIE) was discussed.
  - The representative from local community informed that, chemical dumping is being continued in the KIE area.
  - The representative from the Sukuki Exnora (NGO) informed that, door to door collection and segregation are the key issues in the Solid Waste Management followed by sending it to the MSW dumpsite. Further, the local community shall need to be vigilant on those who are dumping and need to bring it to the notice of the authorities.
  - The Commissioner APIIC informed that, they have established door to door collection system and has a contract with GHMC for lifting the collected waste. It is noted by them that, most of the solid waste is being dumped by outsiders during night times clandestinely.
  - The committee members suggested for keeping check posts at all the entry points into the KIE area. The Commissioner APIIC assured that necessary action will be initiated after discussing with the KASSMA and other stakeholders at the earliest.

#### **Waste Water Management of the water entering into Lake NMK and STP:**

- The Commissioner APIIC informed that as per the GIZ study, the water generated from the KIE area is very less and waste water from the upstream private industrial area is more.
- EE HMDA informed that industrial waste water is being released intermittently into the drains thereby disturbing the functioning of the sewage treatment plant.
- The representatives from the neighbourhood community informed that, the waste water discharged by the plastic recycling industries is also entering into the lake without any treatment and causing pollution.
- The representative from Kattedan Small Scale Manufacturers Association (KASSMA) informed that the water polluting industries from KIE have been shifted. The industrial waste water from G.Kattedan area which is a private industrial estate in the upstream of KIE is also flowing into Katedan KIE. Hence this need to be regulated.
- It was informed to the committee that, under the project the upgradation of the STP from 4MLD to 10MLD is being taken up. The project is in the process of engaging a consulting firm for studying the waste water characteristics, requirement of pre-treatment facility and upgradation of the STP within the given space. The committee will be informed on the findings of the study as per the progress.
- The Regional Officer APPCB informed that, APPCB is not issuing CFO/CFE to the industries in KIE area because of 111 G.O. However, complaints are regularly being attended

and action on the industries that are polluting is taken on case to case basis. Further, in KIE the industrial activities are regularly changing without any information, as the plot owners are sub-leasing the site to other manufactures frequently. It is getting tough to verify the activities of the industries. The KSSMA shall take active role and inform such changes on monthly basis to the APIIC and APPCB.

- The Regional Officer APPCB suggested to establish a pre-treatment facility in the KIE area with the partnership of entrepreneurs in KIE area on similar lines as was carried out for Nacharam and Mallapur Industrial Area.
- The representatives from SOUL informed that, the lake water body may not be encroached. Fixing of FTL drawings for lake NMK were given to the APPCB and based on which the fencing work is finalized. Answering to the query raised by SOUL, the representative of HMDA informed that, M/s. RV Consultants who have been engaged for fixing the FTL of lakes will be mobilized at the earliest to fine tune the FTL marking given by irrigation department.
- The representative from ANGRAU informed that, if the lake is treated to B category, then the water will be fit for irrigation purpose as well. The initiative of placing the Grievance Redressal boxes is applauded and also welcomed.

**Other issues discussed:**

- The committee members requested for placing the maps and other details in the website.
  - It was informed that, the project website is being regularly updated where most of the information is available. If, any other information is missing the issue will be taken up for placing the same in the website. Further, formal public consultation meetings, informal meetings with the community and stakeholders, distribution of fliers are being carried out regularly.
